Step-by-step tasks, all logged automatically

Completing a complex procedure has never been easier and intuitive with WORKS' easy to follow task screens.
In case a user requires more detailed information on a task, support media (photos, videos, audio) and/or documents are just a command/click away.
In select modes (Workflow, Training), all user activities including realized task cycle times, and user inputs are logged.

Feature-rich, yet extremely easy to use

WORKS is a very powerful tool for frontline workers to follow operational procedures, get detailed insights on the job and even fill-out forms totally hands free.
Simply import existing workflows/checklists from Excel so that you do not need to enter all information that you already have.

Schedule and assign repetitive work orders to a single or a group of users

WORKS has an advanced scheduler to allocate a work to a single or a group of users in a timely manner. Every user sees own assignments and semi-finished works on any device that they sign in.
WORKS also has built-in communications tools so that the system could trigger SMS/email messages to inform a user for upcoming work assignment, deadline alert for pending works, and on-time/delayed finish log reports for managerial purposes.

Fill-out forms by voice commands, 100% hands free*

Taskimo WORKS contains a complete digital user input capture infrastructure embedded within the core workflow system. You can create a digital form-filling procedure entirely focusing on user inputs (like an audit checklist) or you can have the user enter some information for selected critical tasks while following a Standard Operating Procedure.
